SUMMARY

Applications Engineer with around 5 years of professional experience specializing in reliable data integration and pipeline development for commercial analytics

SKILLS

Languages & Frameworks: Python, SQL (T-SQL / MSSQL), Java, C#, TypeScript, React, PowerShell, Bash, Groovy

Data & Integration: SSIS, BigQuery, Databricks, SAP, MuleSoft

Platforms & APIs: Salesforce CRM, Marketo, Google Cloud Platform, Azure, AWS, Jenkins, Git

Certifications: Google Cloud Digital Leader; AWS Certified Cloud Practitioner; Databricks Certified Data Engineer Professional

EXPERIENCE

Applications Engineer I & II · *United Parcel Service* · *Parsippany, NJ* **May 2021 - Feb 2024**

- Reduced duplicate contact records by 20% across 100M+ records by building a contact-mastering pipeline that fuzzy-matches in BigQuery and Elasticsearch
- Cut release time by 67% (30 to 10 minutes) for 40+ SSIS packages and 100+ stored procedures by building Jenkins CI/CD pipelines with automated versioning and SonarQube quality gates
- Enabled retirement of a legacy application by sourcing replacements for 90% of 14M+ email-to-account relationships in Databricks and Azure; presented findings to marketing leadership
- Retired 5 mainframe servers by migrating 120M+ GDPR contact-preference records from an on-prem application into SAP
- Replaced a manual daily campaign data process with a streaming sync handling 20K+ records per hour, delivering campaign data in under 20 minutes and feeding weekly performance reports
- Onboarded 10+ new hires by delegating scoped tasks, writing training materials, and authoring technical documentation

Software Engineer I & II · *United Parcel Service* · *Parsippany, NJ* **Sept 2019 - May 2021**

- Shaped the decision to build contact mastering on GCP instead of MuleSoft ESB and Anypoint iPaaS by building proofs of concept and presenting the evaluation to leadership, including a Senior VP
- Surfaced 5 cross-system sync defects through monthly GDPR audits of 120M+ records across applications, preventing withdrawn contacts from receiving marketing campaigns
- Greatly reduced query deadlocks by updating 20+ Java pipelines to implement semaphores and Quartz scheduling
- Successfully identified and escalated 50K+ fraudulent email addresses; led to reCAPTCHA V2 adoption on landing pages

Software Engineer Intern · *United Parcel Service* · *Parsippany, NJ* **June 2019 - Sept 2019**

- Increased ETL upload rate by 80% by migrating synchronous REST API calls to async Bulk API calls with Apache Camel and Java
- Attributed 120K previously anonymous leads to existing contacts by matching first-party cookie data in Java and MSSQL
- Won the High Tech Award at a company hackathon with a mobile digital-badge app hosted on GCP; presented to the UPS CIO

INDEPENDENT PROJECTS **2024 - Present**

- **R2InventoryArtifact:** C# mod for Risk of Rain 2, published on Thunderstore, adding grid-based inventory management with per-client HUDs for multiplayer. Built a companion React/TypeScript configuration tool, deployed to GitHub Pages, that exports item layouts as JSON. [[Git](#)]
- **PopGen:** React/TypeScript browser extension that drafts Depop listing details from product photos using a locally hosted LLaVA vision model through Ollama. [[Git](#)]
- **Portfolio:** Rebuilt three times, from static HTML/CSS/JS to a routed React SPA to a React site that pulls blog content from a separate GitHub repository. [[Git](#)] [[Site](#)]

EDUCATION

B.S Computer Science, Minor in Applied Math · *New Jersey Institute of Technology (NJIT)*

May 2019

GPA: 3.85, Magna Cum Laude, Undergraduate Teaching Assistant, ACM Volunteer Tutor
